

The following is a summary of items submitted as an April 2010 monthly update.

- **Well Installation (MW-41):** Access agreement obtained for proposed MW-41 location. Submitted letter and map with proposed location to EPA on April 19, 2010. Map also included proposed location for second extraction well EX-2. OC proposes to install EX-2
- **Well Installation (MW-40):** Access negotiations for MW-40 have stalled and access to the Hall property appears unlikely.
- **Surface Water Monitoring:** Surface water monitoring completed for locations SW-3A, SW-6, SFM-4, SFM-5, SFM-6 and SFM-7. The results for SW-3A and SW-6 were consistent with historical sample results with site VOCs detected but less than DHEC screening levels. SFM-4, SFM-5 and SFM-7 samples were “ND” for site VOCs. SFM-6 sample had one site VOC detected but less than the DHEC screening levels. Third round of surface water monitoring planned for May 2010.
- **Groundwater Monitoring:** Second quarter groundwater monitoring and residential well sampling planned for May 2010.
- **Interim Measures:** Work Plan in progress and scheduled for submittal by end of April. Two well system is planned and projected to control site VOCs from migrating across OC property boundary.
